# Learning AI Terminology, Made Simple for Election Administrators

When I started to use and learn about artificial intelligence tools, one thing I noticed is that I almost always felt like I was operating from a deficit when it came to my available vocabulary of AI terms.

I'd reach for words or phrases when discussing AI – and I'd come up blank.

All of this made me think: What's the best way to learn words and phrases? For me, growing up, it was always creating flashcards. State capitals, science terms, and on and on. As an election administrator, I made flashcards to quickly learn the names and locations of all the polling locations in my county.

(For what it's worth, I've even remembered some of the things I learned by using flashcards. Capital of Kentucky? Frankfort. Purpose of mitochondria? ... Okay, well, maybe not many of the science terms.)

No matter whether you've implemented AI into your daily workflow or you are taking a more skeptical approach to the technology, I think it's very helpful to have a basic understanding of the words and phrases that are being used.
